IMPROVING PAKISTAN'S EDUCATIONAL SYSTEM

Improvement in the educational system of Pakistan can lead towards the improvement of many departments and fields in Pakistan. Improvement in educational system is not pivotal to country but it also leads to the development of country. The improvement of educational system requires a multi-faceted (many sides) approach. Firstly, education should be spread to the rural areas of Pakistan so that many girls who cannot move towards city for education can be facilitated. This can improve literacy rates of Pakistan. Secondly, teachers should also be trained with professional skills. Investment on teachers training program is crucial. Thirdly, syllabus should be modified yearly instead of sticking to the same syllabus and books. For example, students have been reading Mr. Chips (English textbook) for years, it should be replaced with the "Seerat-e-Tayyaba of Muhammad (S.A.W)". In this way, adding Islamic values to our education can improve the quality of education. Improving the educational system in Pakistan is a multifaceted challenge that requires a holistic approach. Fourthly, improving the infrastructure of schools across Pakistan is another critical step. Many schools, especially in rural and underprivileged areas, lack basic facilities such as clean drinking water, electricity, and adequate classroom spaces. This environment is not conducive to learning and can severely impact student's health, safety, and overall educational experience. Investments in school infrastructure must be prioritized. By focusing on these key areas, Pakistan can make significant strides in improving its educational system. This will not only benefit the current generation of students but will also pave the way for sustained social and economic development in the country. The task is undoubtedly challenging, but with a committed effort from the government, private sector, and civil society, it is within reach.

REVITALIZING PAKISTAN'S ECONOMY

Revitalizing Pakistan's economy requires innovative and practical steps, focusing on key areas for improvement. First, enhancing the agricultural sector, which is the backbone of Pakistan's economy, can lead to significant growth. Farmers should be supplied with modern tools and techniques that can lead to more and more crop yield. By introducing modern farming techniques and technology, production can increase, contributing to overall prosperity. Secondly, boosting the textile industry, a major export earner, through better policies and global marketing strategies, can attract foreign investment. Lastly, improving education and skill development is crucial. By investing in quality education and vocational training, Pakistan can create a skilled workforce ready to meet the challenges of the modern world. Together, these measures can kickstart Pakistan's economy, leading to a brighter, more prosperous future.

REFORMING PAKISTAN'S LEGAL SYSTEM

Reforming Pakistan's legal system is essential for ensuring justice and equality. Currently, the system faces challenges like delays in case processing, outdated laws, and limited access for the underprivileged (not having same rights as majority). To improve, Pakistan needs to adopt modern technology for case management, ensuring faster and more transparent procedures. Additionally, updating laws to reflect contemporary values and issues is crucial. Training for legal professionals on these new systems and laws will enhance their effectiveness. Importantly, making legal services more accessible to all, especially the

poor, by providing legal aid and simplifying legal procedures, can ensure a fairer system. Such reforms will not only benefit individuals seeking justice but also strengthen Pakistan's democratic and social fabric.

LEVERAGING DIGITAL IT SERVICES

In Pakistan, leveraging digital IT services is like opening a treasure box. Leveraging digital IT services, revolutionizing how businesses operate. IT services, including software development, web design, and e-commerce solutions, are providing local and international clients with innovative and cost-effective services. These digital services is not just enhancing the efficiency and reach of Pakistani businesses but also opening up new job opportunities for the youth. As digital platforms become more integrated into daily life, the reliance on these IT services continues to grow, positioning Pakistan as a significant player in the global digital economy. Leveraging digital IT services in Pakistan is becoming a game-changer for businesses. As technology continues to evolve, Pakistan's IT sector is making significant strides, offering a wide range of digital services that are not only accessible but also affordable.

DR. AAFIA AND PALESTINE: SYMBOLS OF RESISTANCE

Dr. Aafia Siddiqui and Palestine both symbolize the struggle against . Dr. Aafia, a Pakistani neuroscientist, became a symbol of resistance after being detained under controversial circumstances. Her case has drawn international attention, highlighting issues of justice and human rights. Similarly, Palestine represents a long-standing fight for sovereignty and freedom. The Palestinian people's resilience (toughness) in the face of adversity has inspired global solidarity movements. Both Dr. Aafia's story and the Palestinian cause remind us of the importance of standing up against injustice. They teach us that the fight for freedom and dignity is universal. Their stories encourage people worldwide to support those who resist oppression and strive for a fairer world. We should wake up as a nation and work for Dr. Aafia's safe return and also fight for the freedom of Palestine.

- Stop Genocide Free Palestine

- Fight for Palestine

- Fight for Dr.Aafia

THE MISSION OF A MUSLIM

There are many missions of a Muslim. But I think first mission being a Muslim is to serve humanity. In Sura 5 verse 32 , it is stated : " If anyone kills a person, it would be as if he killed the whole people, and if anyone saved a life, it would be as if he saved the life of whole people".In this era, full of problems a true Muslim should be kind and should listen to the problems of each other and try to solve it. It's easy to be a lecturer but it's hard to be a listener.The mission of a Muslim revolves around living a life guided by the principles of Islam. Muslims are encouraged to spread kindness, help those in need, and promote justice and equality.A Muslim should reflect the values of their religion in every action. A Muslim should offer

prayers five times a day and also try to contribute in charity. It is stated in Sura Al-Imran :103 " Hold tightly the rope of Allah and do not be divided " By following these principles, a Muslim aims to contribute positively to society and lead a life that is pleasing to Allah.

EFFECTIVE PROGRAM LIKE SDI

My personal experience with SDL course was really adorable, but also a little tough for me as I have to manage my student life with it. But honestly speaking after 12 days of this course, I have learnt too many skills that I couldn't in daily busy schedule. Indeed, the lectures were so informative and after that submission of assignments was really an amazing task. It helped me to learn various skills like graphic designing, video editing, flex making, content writing, grammar rules, basic medicine and many more. In addition of these skills, this course has also attracted our attention towards the situations and hardships from which our country and Muslim Ummah is suffering. Such co-curricular activities develop various skills in students that also help them in their respective fields. Courses or programs like SDL should be launched to improve students' perspectives. The journey with SDL was worth remembering.
